Reliable Controls releases the SS3 Deep Backplate

SS3 Deep Backplate

*SS3 Deep Backplate with
conduit coupler*

Victoria, BC, Canada – Reliable Controls is pleased to announce the official release of the SS3 Deep Backplate.

The SS3 Deep Backplate is an accessory that facilitates surface mounting without the need to cut an opening in the wall. In support of this objective, the backplate has a knockout that is sized perfectly for Wiremold, or it can be ordered with an optional conduit coupler for use with wiring enclosed in ½” electrical metallic tubing.

This accessory is ideal for gas-sensing or wireless models or mounting on an exterior wall where thermal bridging could influence sensor readings. It is designed to fit and cover single-device electrical boxes and is compatible with any device with the SS3 or SST3 form factor.
