

Introducing RC-Reporter 3.9: Intuitive reporting software for building owners

Victoria, Canada—[RC-Reporter® software](#) from Reliable Controls brings clarity to building performance analytics with readable, reliable reporting for facility owners and managers. With RC-Reporter, building owners are empowered to control how and when to transform building data into clear, actionable insights.

Version 3.9 introduces new features and improvements that make reporting faster, more flexible, and more intuitive.

New features

- **Event trigger report distribution:** Inspired by customer feedback, event triggers allow users to automate report distribution when specific data conditions are met, helping facility teams stay informed without lifting a finger
- **Upgraded query editor:** With improved error highlighting and intelligent autocomplete suggestions, the upgraded query editor helps users efficiently write and troubleshoot reports

Key improvements

- Faster processing performances
- Improved identifier visibility
- Enhanced email capabilities
- Smarter PDF export warnings
- Standalone .NET Framework installer
- More accurate binary value projections

“With version 3.9, we focused on making the reporting process more intuitive for our users,” said Mark Farrow, Product Owner at Reliable Controls. “Every improvement is about helping customers save time, get clearer information, and ultimately make better decisions for their buildings.”
