

# Reliable Controls releases RC-Studio version 3.11, the ultimate all-in-one engineering tool

Victoria, Canada—Reliable Controls has unveiled the next version of its BACnet Advanced Workstation Software with [RC-Studio® 3.11](#), making multivendor, multiprotocol integration even more seamless for building operators.

RC-Studio is an easy-to-use, easy-to-learn solution that allows facility managers to develop a complete and customized graphical user interface for monitoring and controlling any application at any scale. With real-time energy management and integrated fault detection and diagnostic capabilities, RC-Studio empowers improved operational efficiency and occupant comfort while helping building owners achieve their sustainability goals.

## New features in RC-Studio 3.11

- Support for .panx files, streamlining the process of backing up and restoring controllers
- The introduction of RC-Auth, a new authentication service, to support Security Assertion Markup Language (SAML) for user authorization and authentication, which makes it possible to access RC-Studio systems through a SAML provider or a SAML identity provider
- Easier editing in graphic groups
- The ability to print multiple devices and networks
- Automatic indexing of [RC-Archive®](#) trend logs
- Support for Microsoft Windows 11 and Server 2022

“Our goal with RC-Studio 3.11 is to make building operations more intuitive and efficient for our users,” says Kerem Gurses, Product Owner at Reliable Controls. “This version introduces powerful new features to streamline workflows, enhance operations, and help our customers meet their objectives.”

Reliable Controls is a building automation solutions provider that puts people first. Founded in 1986, the company develops [simple, flexible, sustainable products](#) backed by industry-leading customer support.
