Reliable Controls adds to its suite of integrated building security solutions

Victoria, Canada—Reliable Controls is pleased to announce the release of the MACH-Sentry™ controller, a building security solution that provides integrated intrusion detection and wireless access control in two complementary models.

The MACH-Sentry Intrusion Detection System offers true open connectivity in a highly expandable security controller, with options for three enclosure sizes, up to three touchscreen user interfaces, an LTE modem, and expansion to accommodate up to 64 inputs and outputs.
The MACH-Sentry Wireless Access Control System interfaces with ASSA ABLOY Aperio hubs to simply and effectively extend the reach of a building access control system and connect with a wide range of wireless door and cabinet locks, including locking solutions in challenging locations—without the cost or inconvenience of running wires.

"It's exciting to see the MACH-Sentry released to our dealers," says Cameron Lutz, Vice President of Marketing and Communications at Reliable Controls. "Integrating a native BACnet intrusion detection controller into the Reliable Controls system will give building owners and occupants enhanced security and a simpler system to operate overall."

MACH-Sentry devices from Reliable Controls expand the company's current security offerings, the MACH-CheckPoint door access controller and RC-Passport security management software, providing facility owners with peace of mind, no matter the size of their building portfolio.

Truly efficient buildings demand a high level of integration between HVAC, lighting, and security systems. Reliable Controls provides simple, flexible, sustainable building automation solutions backed by a 5-year warranty and extensive training and support, with over 200 factory-certified partners in more than 40 countries and a LEED Platinum– and ISO-certified corporate office and manufacturing facility in Victoria, Canada.
